Re: Cover letter

I am a data analysis enthusiast who is looking for new job opportunities to grow personally and professionally. By education I am an engineer and I have a long experience in requirement handling and in IT industries' processes. Recently, I started to get very interested in Statistics and Data Analysis and now I would like to work as a Data Analyst, Data Scientist or Business Analyst in Helsinki region.

I have created a solid personalized study plan that I am following successfully in order to improve my data analysis skills continuously. I can program in R and I am familiar with data analysis techniques such as data cleansing, data preparation, data analysis, and data visualization. I can do exploratory data analysis and inferential data analysis and I can fit prediction models. My knowledge of databases include SQL and Hadoop framework (MapReduce, Spark, ...)

In my past career, due to my strong logical and analytical skills, I have enjoyed dealing with customer requirements for twenty years. I have identified potential use cases, analyzed the requirements and decomposed them into smaller ones by using Agile approach. I have been finding solutions to customer needs by using existing solutions, by integrating with third party products, by developing new features, by enhancing existing features. I have created specifications to be used by developers and marketing material to be used for communication with customers.

I get inspired by working in a multicultural environment and I am effective in communicating with people of different background (sellers, developers, testers) and belonging to different organizations. I am pleased to work in a team and able to make independent decisions.

I have a long track record of contribution to process and tool development thanks to my critical approach to existing practices.

I tend to be precise at work and I am gratified when delivering high quality artifacts while at the same time I am reliable in delivering according to the given commitment.

Having lived for a long time in Finland, I can manage with Finnish both in conversations and when reading, even though my preferred language for writing remains English.

I am interested to work for a mid-sized company in order to have the possibility to get a wide enough role.

Currently, I am searching new opportunities in industries related somehow to one or more of those fields: health and well-being, education, ships, boating, music, sports and leisure, sustainable development.

Since I am part of the European Globalization Fund, should you decide to hire me, you would have a chance to save money in payroll costs. The amount of the pay subsidy starts from 30 % of the payroll costs for a duration of six month.

Best Regards,

Bernardo Di Chiara
